SUMMARY

Full-stack developer building and maintaining real-world products from customer-facing web applications to backend systems. Focused on shipping reliable solutions that solve real problems and support business goals. Currently deepening backend infrastructure and deployment skills to design scalable production-ready systems.

PROJECTS

Karta - E-commerce Platform | *Next.js 15, Supabase, Zustand, Zod, Tailwind*

- Built full e-commerce frontend — product listings, cart, checkout, and authentication
- Integrated Supabase for database management, RLS policies, and Google OAuth
- Managed global cart state with Zustand and form validation with React Hook Form + Zod
- Deployed on Vercel with optimized performance and responsive design from 360px
- [Live](#) | [GitHub](#)

Karta REST API | *Node.js, Express, TypeScript, Prisma 7, PostgreSQL, Docker*

- Built full CRUD REST API for Karta's e-commerce backend
- Integrated Prisma 7 ORM with PostgreSQL running in Docker
- Implemented relational data modelling — users, products, orders, and cart
- Structured with clean error handling middleware and environment configuration
- [GitHub](#)

Rizz — Hotel Management Dashboard | *React, React Query, Supabase, TypeScript*

- Developed admin dashboard for managing bookings and cabin operations
- Implemented role-based UI with dynamic data rendering
- Used React Query for server state, caching, and prefetching adjacent pages
- Connected to Supabase backend for real-time data updates
- [Live](#) | [GitHub](#)

TECHNICAL SKILLS

Frontend: React, Next.js 15, TypeScript, JavaScript (ES6+), Tailwind CSS, Zustand, React Hook Form, Zod

Backend: Node.js, Express, NestJS, REST APIs, JWT Authentication, Prisma ORM

Database: PostgreSQL, Supabase, Docker

Tools: Git, GitHub, Vercel, VS Code, Postman, Prisma Studio

Currently Learning: DevOps, Linux, AWS EC2, CI/CD Pipelines

CURRENT FOCUS

DevOps & Cloud Engineering | *Linux, AWS, CI/CD, Infrastructure*

- Deepening infrastructure and deployment skills across Linux administration, AWS EC2, CI/CD pipelines and cloud infrastructure management

EDUCATION

Structured Engineering Roadmap

Full-Stack Development | Backend | DevOps

2023 – Present

- Completed project-driven phases covering HTML, CSS, Tailwind, React, TypeScript, Next.js, Node.js, and NestJS
- Every phase validated through shipped, production-deployed applications
- Currently advancing into DevOps, AWS infrastructure, and Systems Design
